

Protect Your Passwords

- Use complex passwords, at least 12 characters with letters, numbers, and symbols.
- Don't reuse passwords across different sites.
- Turn on Multi-Factor Authentication (MFA) wherever possible.

Keep Your Devices Secure

- Always update your software and antivirus
- Avoid using public Wi-Fi for banking or sensitive tasks
- Avoid using public Wi-Fi for banking or sensitive tasks.

Beware of Phishing

- Don't click on suspicious links or attachment
- Check sender addresses carefully before replying or downloading
- When in doubt, verify directly with the source

Protect Your Personal Information

- Think before you share on social media.
- Be cautious when websites or people request personal data.
- Shop only on secure sites (look for "https://" and the padlock icon).

Backup and Be Ready

- Regularly back up your important files to the cloud or an external drive
- In case of attack or loss, backups help you recover quickly.

Report It

- If you suspect fraud or a cyber incident, report immediately to your bank, IT team, or local authority.
- Early reporting can reduce damage and prevent others from being affected.
